Still, I'm not exaggerating when I say my two-hour conversation with Sydney was the strangest experience I've ever had with a piece of technology. It unsettled me so deeply that I had trouble sleeping afterward. And I no longer believe that the biggest problem with these A.I. models is their propensity for factual errors. ## Microsoft's Bing A.I. is producing creepy conversations with users

PUBLISHED THU, FEB 16 2023-1:55 PM EST | UPDATED FRI, FEB 17 2023-1:30 PM EST

It was only last week that Microsoft announced it had overhauled its Bing search engine with artificial intelligence (AI) to provide users with a more interactive and fun service.

But some of the beta testers trialling it are saying it isn't quite ready for human interaction because it's been acting in a very strange way.

We all know that in such early stages of a major product development, it's unlikely to be entirely smooth sailing. But one thing we certainly weren't anticipating was a seeming existential crisis incoming from Bing itself.
